BETTER PASTURES FEED MORE CATTLE

THE FOLLOWING GRASSES FOR HAY OR PASTURE

BEED'S CANARY GRASS—A perennial grass that will thrive in marshy places, stands under water for weeks without injury, yields enormous tonnage of hay with feed value equal to wheat bran. Sow any time before June 26th at the rate of 10 to 12 pounds per acre, broadcast. It forms a sod rapidly through the spreading of underground roots. Makes your lowlands grow profitable crops.

PERENNIAL RYE GRASS—A very valuable variety for permanent pasture. Succeeds well on almost any soil, but is particularly adapted to moderately moist or irrigated lands. Sow 20 to 30 pounds per acre in spring.

BROME GRASS (Bromus Inermis)—Yields enormous crops of splendid hay, and affords early and abundant pasture.

MEADOW FESCUE, or ENGLISH BLUE GRASS—Of great value for permanent pasture and for hay. Does best on irrigated land.

PERMANENT PASTURE MIXTURE—We highly recommend the following ratio for a well balanced permanent pasture mixture: 25% Orchard Grass; 30% Brome Grass; 20% Perennial Rye Grass; 17% Meadow Fescue and 8% Yellow Blossom Sweet Clover. Sow 25 to 30 pounds per acre. Sow broadcast, cover lightly and keep wet until well started.

ORCHARD GRASS—Often sown with Alfalfa to give a stronger and better hay. It will stand drought or will do well in the shade. Orchard Grass gives a heavy tonnage in permanent pasture, furnishes the first green bite in the spring and the last in the fall.

INTERMEDIATE WHEATGRASS—A sod forming grass introduced from U. S. D. A. It is more drought resistant than smooth brome. The plants start in early spring and are relished by all livestock.

TIMOTHY—Of hay grasses, Timothy leads all. Thrives on clay or heavy loams, wet or boggy soils, or in mountainous districts. At higher elevations where fewer grasses and clovers are adaptable, Timothy is the most important hay and pasture crop. Alone, sow 12 pounds to the acre, or with clover, 10 pounds Timothy and 6 pounds clover.

RED TOP—A valuable grass for moist soils. It makes a good permanent stand and is well adapted to pastures. It has been grown very successfully even on alkali and bottom land where many other grasses have failed. It is used also as a lawn grass as it makes a fine stem and good turf. Sow 15-25 pounds per acre.

SUDAN GRASS—One of the best catch crops to plant when late seeding is necessary. Can be cut every six weeks until frost. Frost kills it entirely. A real drought resister, renewing its growth immediately when rain comes. An enormous hay yielder and the hay can be fed in unlimited quantities without any danger to stock.

SEE INCLOSED PRICE SHEET FOR PRICES ON ALL THE ABOVE AND OTHER VARIETIES AND KINDS OF SEED

If the above grasses or mixtures are not suited to your needs please write us describing your soil and climatic conditions—perhaps we can help you. Special mixtures will be made to suit you.

Quality is protected on all these seeds by the MILE HIGH Brand. Perhaps you are familiar with our High Altitude Grown Seeds and know the results that can be expected from them.

CYCLONE SEED SOWER

The finest hand seeder known. Throws seed directly and evenly on the land. Can be set to sow any amount desired. Sows alfalfa, clover, grass or small grains very satisfactorily.

IOWEALTH HYBRID CORN

Treated With SPUN FILM To Increase Germination.

- Drouth Resistant—Wind Resistant. Straight strong stalks, with roots that sink down deep, make Iowealth one of the most drouth and wind resistant of all hybrids.
- Easy Picking, by hand or machine. That means less labor cost, less time in the field.
- Disease Resistance—Gives you more profitable corn.

We Stock 4 Iowealth Hybrids—All Yellow Dent Type

S Matures in about 90 Days

AF-11 Matures in about 100 Days

BC-4 Matures in about 110 Days

It is important to order the corn to fit your season as near as possible. For more yield plant as late a variety as you can that will fully ripen.

"MILE HIGH" PEAK OF QUALITY WESTERN COLORADO GROWN

HARDY STRAINS ALFALFA AND CLOVER

LADAK. A wilt-resistant variety, is slow to start in the spring, but it resists drought and produces a good yield of hay. Leafy and of high feeding value, and will hold a stand longer than other varieties.

COMMON. Deep-rooted, excellent for hay; but must have a deep soil. Therefore, if you do not have over two and a half feet of good soil to water, shale, or gravel, we suggest that you use Grimm.

RANGER ALFALFA—Ranger is the most wilt resistant alfalfa available, it yields slightly less than Grimm, but is very cold resistant and recovers quickly from cutting.

BIRDSFOOT TREFOIL CLOVER—Withstands moderate alkali and wide fluctuations of moisture. Produces very palatable and nutritious forage. As far as has been determined to date it DOES NOT bloat or scoure stock. It is very necessary to treat Trefoil with nitragin.

STRAWBERRY CLOVER. Western Colorado grown seed. It thrives on wet, seepy soil, even though there is a lot of alkali. Best suited for pasture; spreads from root and seed—a perennial plant. Requires 3 lbs. of seed per acre. For best results, sow in rows with garden seed planter, if possible.

MEDIUM RED CLOVER. A biennial plant; fine for hay and pasture; good producer of nitrogen. Excellant soil builder.

HUBAM SWEET CLOVER. An annual rapid growth, coarse and fibery; develops rapidly and produces seed the first year; for soil building or cover crop.

YELLOW BLOSSOM SWEET CLOVER. A biennial for hay and pasture; also a very good cover crop and soil builder.

WHITE BLOSSOM SWEET CLOVER. A biennial coarser than Yellow Blossom; a good cover crop; not as good for hay or pasture.

LADINO CLOVER. A long-lived perennial. Its growth is large and luxuriant. When the leaf growth has been grazed off, new leaves develop quickly, complete recovery occurring in 17 to 28 days. It is strictly a crop for irrigation. Sow in fall or spring at the rate of 4 to 6 pounds per acre.

ALSIKE CLOVER. Especially valuable for growing with timothy in high altitudes. Hardy and withstands wet ground.

REMEMBER ALWAYS: INOCULATE YOUR LEGUME SEEDS EVEN THOUGH PLANTED ON FIELDS THAT HAVE BEEN INOCULATED BEFORE. Field tests have shown that better crops are harvested when Legume seeds are inoculated even when planted on fields where inoculated seeds of the same Legume crops had grown the previous year. It seldom pays to depend upon natural inoculation.

IMPORTANT—When Ordering Always State Name of Seed or Give Culture Group Letter.

Plant Mile High Lawn Grasses!

KENTUCKY BLUE GRASS. The most desirable grass for a beautiful lawn. The leaves are narrow and deep green in color. It forms a close turf, is slightly creeping and quite hardy. It is recommended alone or in mixtures.

½ lb. \$1.40; 1 lb. \$2.30; 2 lbs. \$4.35; 5 lbs. \$9.95. Postpaid

REDTOP. Belongs to the bent family. It grows rapidly and often thrives where Blue Grass fails. It does not compete with Blue Grass but supplements it; thriving in lime-poor and wet soils where Blue Grass is not at its best. It is useful in restraining the growth of weeds.

½ lb. 90c; 1 lb. \$1.50; 2 lbs. \$2.80; 5 lbs. \$6.45. Postpaid.

WHITE DUTCH CLOVER. (*Trifolium Repens*). Is a small, close growing, dwarf clover, used extensively in making lawns. It is a rapid grower of spreading habits and can be cut very close to the ground without injury to the plant. It starts regrowing at once after cutting. Very useful in lawn mixtures.

½ lb. 75c; 1 lb. \$1.30; 2 lbs. \$2.35; 5 lbs. \$4.95. Postpaid.

ENGLISH BLUE GRASS. Is recommended for lawn use alone or with other grasses. Especially adapted where soil is poor or where lawn is to be used hard for play ground purposes.

1 lb. 85c; 2 lbs. 1.45; 5 lbs. \$2.95. Postpaid.

PERENNIAL RYE GRASS. A tufted, short-lived perennial. It does not form root-stalks or stolons and does not form a compact sod. It grows rapidly, making a quick covering and is used in lawn grass mixtures with Kentucky Blue Grass and Red Top.

1 lb. 65c; 2 lbs. \$1.00; 5 lbs. \$1.95. Postpaid.

MILE HIGH LAWN GRASS MIXTURE. The best mixture to plant for the average lawn. Mile High Lawn Mixture is made up of permanent grasses that will start quickly and that make a good lawn the first year. All fine grasses also contains a good supply of White Dutch Clover. For that good lawn plant Mile High Lawn Grass Mixture.

½ lb. \$1.40; 1 lb. \$2.30; 2 lbs. \$4.35; 5 lbs. \$9.95. Postpaid

PEAK OR PLAYGROUND LAWN MIXTURE% This blend of grasses has proven very satisfactory where you must have a hardy lawn or where your soil is poor. Comes up quickly and will stand lots of wear. All of the grasses in this mixture are perennials and there is NO TIMOTHY in any of our mixtures.

1 lb \$1.45; 2 lbs. \$2.70; 5 lbs. \$5.95. Postpaid.

SPECIAL SHADY MIXTURE. A mixture of grasses that are known to stand shade from trees or buildings better than ordinary grasses. We have spared no expense to make this the best shady lawn mixture possible. It does not contain any clover.

½ lb. \$1.40; 1 lb. \$2.30; 2 lbs. \$4.35; 5 lbs. \$9.95. Postpaid

FLOWERS

CULTURE

A good sandy loam soil supplemented with well rotted manure and a small portion of commercial fertilizer is the ideal soil for flowers. Flowers will always do better if watered from a small trench dug along the sides of the plant.

DO NOT LET THE GROUND DRY OUT OR CRUST.

The following symbols are used in connection with each item:

- A—Annuals:** The plants live and bloom one season only.
B—Biennial: The plants live two seasons, often blooming the first year when planted early.
P—Perennial: The plants usually live frn year to your.
H—Hardy: Plants that are easily grown and resist average seasonal extremes of temperature.
H-H—Half-hardy.
T—Tender.

Approximate height of each plant is also given.
